1. Product Overview

1.1 Parents Unit Console Overview

2. Start Using

2.1 Camera-side Power

- 1) Connect the Micro USB plug of the power adapter to the camera, the other side to the power outlet, it should connect the power adapter to the 110-220V AC outlet.
- 2) Once the camera is plugged in, it will automatically turn on and the blue indicator will be on (the night mode will automatically turn off).

2.2 Camera-side Turn On and off

- 1) Turn on, plug in the USB power cable.
- 2) Turn off, remove the USB power cable.

2.3 Parent Unit Switching On and Off

- 1) Charge battery for parents unit, The process from no power to full charge takes about 3-4 hours. But as long as the parents unit is plug in usb cable, the machine can be turned on and used.
- 2) Press and hold the power switch key  for 3 seconds to switch on/off the parents unit, pull out the receiving antenna on the parents unit.

2.4 Watching The Image of Camera

When both the camera-side and the parents unit are turned on, the display should be able to display the image taken by the camera. (If the display is not normal, check the camera pairing pls.)

- 1) If the pairing is not successful, please refer to 2.5 Pairing Instructions to pairing camera;
- 2) If the paired camera is , need to press the switch key  to switch camera to  to display the image. If the paired camera is , you need to press the switch key  to switch to the  to display the image.

2.5 Pairing

Once the camera-side and parents unit are both switched on, they will be paired automatically. If not, follow the steps below:

- 1) When the camera is turned on, pls double press the power button  until the blue light flashes quickly, release the button, it will enter the code mode. At the same time, open the parent unit display and press  button to turn on the menu. Press  or  to select  and press  to confirm. In the pop-up bar, continue to press  button to select  and press  to confirm, and then press  or  to choose  or  for pairing. At this time, the red light in the upper left corner of the display will flashes, when pairing successful, the light of camera and display will stop flashing. The display will show the image of the pairing camera. If there is no connection for 10 seconds, the code mode will be automatically exited.
- 2) Press  to return to the main menu, press the camera switch button  to change camera.

(Note: one camera just can be connected to one display, but one display can be connected to two cameras at the same time)

2.6 Formatting Of TF Card

With new TF card, when the camera is powered on, press and hold the key  (3 seconds) to format the TF card. When the blue light flashes twice means the TF card format is completed, and then you can start record video. (The camera's TF card video can only be viewed on a computer or other device).

Use a small pin to reset

5. Cleaning

Clean the device with a slightly damp cloth or an antistatic wipe. Never use detergents or abrasive solvents.

Cleaning and maintenance

- Do not use thinner, other solvents or chemicals to clean any part of the product, which will result in damage to the product. This damage is not covered by the warranty.
- Do not expose the product to high temperatures, humidity, or strong sunlight, and do not get it wet.

6. FAQ & Troubleshooting

1. Q: Why is the distance in the room not far enough?

A: a. Check if the receiving antenna of the parent unit terminal is turned on;

b. Due to different wall materials of different houses, the blocking of 2.4G signals is different. When the signal is not satisfied, the position can be adjusted.

2. Q: Why there is always some noise in the background?

A: It is impossible to eliminate all the noise. This kind of howling has always been a problem in the audio field. Please keep your receiver and camera separate in 1 meter away or more.

Tip: The microphone of the receiver and camera cannot be too close. That is the reason why some users get confused when they operate the devices and always get noise in the background. This phenomenon is an uncontrollable factor.

3. Q: Why the temperature not precision showing on the screen?

A: a. There is a difference in indoor air circulation.

b. The temperature sensor just placed in a new environment, and there will be a deviation within two hours.
