

NO MORE FLOODING – NO MORE SCALDING

The Magiplug is an ingenious and useful device that will prevent overflowing of a conventional bath under normal bath - running conditions.

(School of Engineering & Electronics, University of Edinburgh, April 2004)

Magiplug is a bath and sink safety plug that works using a pressure activated system. When an unattended bath reaches a certain depth the pressure plate opens and releases the excess water safely down the waste exit or plughole prior to flooding – this level will be maintained until the taps are turned off. When the desired level is reached the pressure plate will close again leaving you a filled bath.

To use simply remove your existing plug and use Magiplug instead. It can also be attached to your existing chain if desired.

**Suitable for Baths more than
38 cm (15") deep**

**Suitable for Kitchen Sinks more than
16.5 cm (6.5") deep**

**Suitable for Bathroom Basins more than
12.5 cm (5") deep**
