

Second - Generation Supra P500 Keysafe™

Police Accredited & Tamper Resistant

The P500 KeySafe™ has been designed following extensive consultation with users. The security of the key safe is the highest level ever awarded to a mechanical push-button key safe in the UK, achieving the impressive LPS1175 level 5

accreditation. As a result of this security rating, the product has achieved police preference through the Secured by Design initiative.

Construction:

The Supra P500 KeySafe™ is made of heavy gauge stainless steel and a thick zinc-alloy shell. It comes complete with a stainless steel backplate integrated into the zinc shell to create a triple wall construction and a code tamper protection plate. A stainless plate around the buttons adds additional security and is scratch and fingerprint resistant. The heavy-duty locking mechanism uses a long-travel bolt, making it extremely pry-resistant. A clutch mechanism prevents the handle from being forced open. If the key safe is locked and the handle is turned with force, the handle slips and turns effortlessly without opening. Just turn the handle back to the closed position until it clicks to re-latch the handle.

Approvals:

The Supra P500 KeySafe™ has been tested against physical attack and as a result has received LPS1175: Issue 8, Security Rating 5 accreditation, meaning that it can withstand a 5 minute plus attack.

To maintain the security certification, the KeySafe™ needs to be mounted using the included screws onto a brick, concrete.

Applications:

The Supra P500 KeySafe™ has many applications including; access for home healthcare and home services, remote sites, property management, equipment storage, after-hours delivery, alarm or emergency access, secure storage for spare keys, emergency entry and holiday homes.

Features of the Supra P500 KeySafe™ include:

- Masonry screw fixings, which securely attach the key safe to the wall, resisting any attempts to remove it.
- A and B buttons to allow over 4,000 possible combinations.
- An 'OPEN' dial to allow access when the correct code is entered, yet its unique clutch mechanism will slip if an incorrect code is entered.
- Complete with stainless steel reinforcement back plate and code tamper protection.
- Fully integrated weather cover, protecting from the elements.

Standard Features:

- Solid metal construction
- Easy push button access
- 4,096 possible combination codes
- Store 5+ keys
- Weather cover included
- Mounting hardware included

Fitting Kit Included. Only suitable for concrete, brick and rendered walls

Technical Specification

Physical:
